This is basically a walking 2D simulator with creepy monsters, you can't defend yourself other than find clues as to what is going on in the prison block. now the monsters can kill you. but you can't kill them, all you can do is run away. If you can at least defend yourself than this game would be good.

Its not a bad game, and I like the music in the background. but if you can't do anything other than find clues, walk around and not able to defend yourself than its not fun to play. though it says you can hit enter for action. but it didn't seem to work. Others might enjoy it, but I got quite bored after awhile.. Game is unplayable due to the bugs. I cannot even leave that Bar in the beginning. When i try to throw a hammer into the door to open it - hammer just disappears to nowhere forever. Door remain closed and i can't proceed further. I tried it 3 times with the same result. I give up... Why that ♥♥♥♥ing basement door just don't opens simply? Also game have no options at all. But this is no problem. Real problem for me - you can't invert Y mouse axis and author was so fair saying that he don't know how to do that:) I am really like the concept/idea and the whole setting and atmosphere but i just cannot play due to those technical issues. Too sad.... Buy it for the motherland and the comrade Stalin.. I am recommending this game but only if you buy it at -80% or less.

-mono sound and cannot level it down. I had to put it to 1%! from the Windows volume mixer.

-Mouse accleration - crappy mouse movement but it's not that game-breaking for such a game.

-Low resolution

+If you have played the previous game and liked it - you will like this one too - more levels, some new enemies and new firing patterns!. so m f cute. bought this for my girlfriend, THERE IS NO LEAVES on level 6!! HOW IS SHE SUPPOSED TO CONTINUE AND PASS THAT LEVEL IF THERE ARE NO LEAVES. Poorly balanced auto-click ability tree. UI doesn't give good info like VPS/level or the even more valuable VPS/(\$*level)

Edit: I mean most games have that as a hover window or right on the button what the VPS is, not hiding one window in. Also the balance of items going from .1 VPS/level -> .5 VPS/level -> .6 -> .7 -> .8 -> 1.0VPS/level is really little progression for item tiers.. No, dont buy it!. Jolly Rover is that kind of game that starts off slowly, gets a lot better the further you progress into it, but never becomes truly great. However, it still holds itself well in the adventure gaming market, with lots of impressive visual detail in its backgrounds and character animations.

Item interactions and puzzles are very often straight-forward and obvious, though a few are actually truly clever. There is voodoo magic that you learn throughout the game by mixing various symbols together, and is used pretty well as a puzzle mechanic without ever becoming overly complex.

I enjoyed this mostly for the story and animation. While the puzzles weren't great, they never felt out-of-place or too simple, and I feel the experience as a whole made for a very solid adventure game.

3 out of 5 foxes.. tis a very neat game

get it

and the other ones.
